CRAFTBOUND

Foundation Design Reference

Clear wording. Distinct classes.
A complete source of Minecraft card inspiration.

WORKSHOP EDITION / 2 NOVEMBER 2026

Minecraft Java 26.3 | Fabric | Current rules and proposed designs clearly separated.

1,658 items / 1,286 blocks / 161 entity types
40 effects / 46 potion definitions / 8 playable classes

Use the searchable Design Reference tab in Card Workshop while editing. Keep this PDF for reading, printing and planning.

Start here

This is a working design reference for rebuilding Craftbound's Foundation set. Clear card text is a release requirement, not finishing polish. A player should know the target, timing, result and duration without guessing what the author meant.

CURRENT means verified in the local Craftbound source on 2 November 2026. PROPOSAL means a design option, not a promise that the Workshop can implement it. VANILLA INDEX means an exact identifier extracted from the installed Minecraft 26.3 registries or game data. A Minecraft object does not automatically become a Craftbound card or effect.

Use the Workshop's Design Reference tab while editing. Search for a class, keyword, object or mechanic. The generated text is the authority for what an effect configuration describes; custom prose cannot create new rules. Use the current-card appendix as a snapshot, not a replacement for the live editor.

What this reference covers

The appendices enumerate every registered vanilla item, block, entity type, status effect and potion definition in this installed version, plus vanilla enchantments and biomes. Technical entities, air and unobtainable blocks remain in the index for completeness. Block states, individual enchanted-item combinations, every possible mob appearance and every crafting recipe are not separate registry entries. The mechanics chapters are a broad design taxonomy, not a claim to enumerate every emergent Minecraft interaction.

Decisions for this rebuild

- Dismantle is removed from gameplay. A block must justify its board slot through ongoing value, a passive or a supported payoff. Harvest and Mine remain distinct actions.
- Keep Ranged's weakness: it avoids ordinary retaliation when attacking, but does not retaliate when attacked. Explicit effects such as cactus damage still happen.
- Keep card identity separate from rarity and cosmetic finish. An Enchanted collectible is cosmetic; an Enchantment card adds gameplay effects to a tool.
- Preserve existing stable IDs and collector order. Retire old cards through the supported deletion flag; append new definitions. Do not physically reorder or strip the original entries from JSON.
- Do not add all proposed keywords at once. Foundation needs a small teachable vocabulary and functioning decks before novelty.

Wording standard

CURRENT IMPLEMENTATION: Generated Item and Enchantment effects no longer begin with redundant Play. Board-card play effects retain Spawn. End-turn and attack triggers identify the timing more clearly. Draw, Give and Summon use singular/plural wording. Legacy timing labels and generated timing phrases are bold in card rendering; bold text alone does not make something a hover keyword.

The four questions every rule must answer

Who or what is affected? When does it happen? What changes and by how much? When does that change end? Add a condition, choice or frequency limit only when the game actually enforces it. Never rely on an illustration to communicate a restriction.

Avoid	Prefer	Why
Play: Draw 1 card(s).	Draw 1 card.	An Item already resolves when played.
End turn: heal 2.	At the end of your turn: Restore 2 Health to your hero.	States whose turn and the recipient.
After attack: summon wolf.	After your hero attacks: Summon Wolf Pup.	Tools trigger on the hero's attack.
Give a friendly mob +1/+1, while blocks are legal targets.	Give a friendly mob +1/+1, or a friendly block +2 Health.	Separate the two target branches.
Freeze an enemy.	Freeze an enemy mob or hero.	A broad word must not conceal target restrictions.
Gets stronger near fish.	After you play another Aquatic mob, this gains +1 Attack until the end of the turn.	Says what triggers and when the bonus expires.
Has a Totem.	Give a friendly mob or block a Totem of Undying.	Use the named effect consistently and explain it on inspect.
Your units have +1 Attack.	Your other Illager mobs have +1 Attack.	Other excludes the source; Illager limits recipients.
Draw a random card.	Draw 1 card. / Add a random card from [Cod, Salmon] to your hand.	Drawing your deck differs from generating a card.
+2 Attack and +0 Durability.	+2 Attack.	Omit attributes that do not change.

Vocabulary and grammar

Use Attack, Health, Durability and XP consistently. Use mob for an attacking board creature and block for a non-attacking board permanent. Use hero for a player avatar in the match, not player when the effect could be confused with the Minecraft character outside the GUI. Say mob or block when both are legal; say mob or hero when blocks are excluded. Avoid character unless its meaning is defined identically in every tooltip.

Play means spending a card from hand. Summon means creating a board entity; it does not imply Spawn triggers. Draw means taking a card from your deck. Add means creating or receiving a card in hand. Return means moving an existing board card to its owner's hand; current tokens disappear instead. Destroy, remove, harvest and mine are not interchangeable.

For a permanent stat buff, write Give a friendly mob +1/+1. For a temporary effect, include until the end of the turn. Do not say base stats return: temporary Attack must expire while unrelated permanent buffs remain. A maximum-Health increase and healing are different effects; +2 Health increases current and maximum Health in the current implementation.

Labels are not all keywords

Shield, Sprint, Ranged, Spawn, Drop, Block and Cleanse currently have keyword tooltip support. After attacking and At the end of your turn are timing phrases, not extra mechanics to memorize. Grazer, Battle-hardened and Schooling are passive implementation choices; their full rules are currently written out. Harvest and Mine are actions/events, not generic substitutes for death.

For Foundation, omit Play from one-shot cards; retain Spawn and Drop because their timing matters. Keep timing phrases bold for scanning. Do not replace a clear sentence with a new keyword unless enough cards repeat the same rule to justify the teaching cost.

Length and layout budget

Aim for one main idea, one sentence or two short clauses, and roughly 12-30 rules words on ordinary cards. These are design targets, not automatic truncation limits. Longer text is acceptable when necessary to specify targets correctly. If a common card needs three unrelated effects, simplify its design before shrinking its font. Read it at actual collection-card size, not only in the large inspect panel.

Never shorten by omitting enemy, other, random, until, or once per turn. Those words change gameplay. Remove filler instead: in order to, will then, a total of, the amount of and unnecessary Play prefixes.

Wording review before Save

- Compare the sentence with the actual target selector, Board kind, Type, event scope and self-exclusion settings.
- Check whether a trigger observes played cards, summoned mobs, real healing or attempts that do nothing.
- For multiple effects, check execution order and whether all chosen effects share one legal target.
- For repeated effects, state the limit only if the engine enforces it. A sentence saying once per turn does not create a limit.
- Check one versus many: Draw 1 card; Draw 2 cards. Use copies of a card name instead of inventing a plural for its title.
- Inspect generated tokens and attached tool text too. The parent card alone is not the complete experience.
- Keep a custom description only when it describes exactly the same rules as the structured effects.

Current rules and terminology

CURRENT: Normal matches start at 30 hero Health, use 30-card decks, allow seven board slots per side shared by mobs and blocks, and allow ten cards in hand. Regular deck limits are two copies per identity and one for Legendary cards, counting normal and Enchanted together. XP increases and refills on your turns up to the usual ten maximum; temporary XP effects can provide additional spendable XP. PvP turns have a 75-second timer, with the fuse during the final 15 seconds. Card Master games are untimed.

Card kind versus mob type

Player-facing kind should be Mob, Block, Item, Tool or Enchantment. Mob type should describe an affiliation or family such as Undead or Illager. These solve different questions. Internally, a Block currently uses kind MOB plus the BLOCK keyword. The editor presents a block choice, but changing the underlying kind of an established ID is protected. Treat this as a storage detail, not wording to expose to players.

CURRENT mob-type field values: Animal, Undead, Arthropod, Villager, Illager, Ender, Nether, Golem, Slime, Crop, Aquatic, Ore and Tameable. Crop and Ore are resource families usually placed on blocks. A card currently has one type field, so a Drowned cannot simultaneously be Undead and Aquatic through this field. Do not write dual-type synergies as if supported. Multi-type tags are a possible future feature.

Core keyword glossary

Term	Current behavior	Design caution
Shield	Opposing attacks must target an attackable Shield board card before other board cards or the hero.	Does not redirect every Item effect. Stacking several durable Shield cards can stall games.
Sprint	A newly played/summoned mob can attack enemy board cards immediately, but not the enemy hero that turn.	Its later hero attacks follow normal rules. Avoid efficient removal attached to an oversized body.
Ranged	Avoids ordinary counterattack damage when attacking. Deals no ordinary retaliation when attacked.	Explicit triggered damage still applies. Fragile bodies make its weakness meaningful.
Spawn	A board card's effect when played from hand.	Ordinary summon, transform and Totem revival do not imply Spawn.
Drop	Resolves when the board card dies. Mining an Ore also explicitly runs its Drop.	Returning, transforming and harvesting do not trigger Drop.
Block	A board permanent that cannot attack or ordinarily retaliate. Attack buffs do not give it usable Attack.	Damage effects can still make a Cactus dangerous. Ongoing usefulness is essential.
Cleanse	Removes Frozen, Withered and negative Attack debuffs from a board target; removes Frozen from a hero.	Does not heal damage, erase positive buffs or act as general silence.

Status effects and attached effects

Effect	Current behavior	Wording implication
Frozen	Prevents attacks, including hero tool attacks. Start/end-turn bookkeeping makes the affected owner's attack opportunity be skipped.	Do not say one second or a real-time duration. Spell and power use are not generally frozen.
Withered	Takes 1 damage at the start of each owner's turn until removed.	The authoring rules exclude heroes. Use mob or eligible board target, not any enemy hero.
Invulnerable	Prevents damage until the start of the owner's next turn.	Does not necessarily prevent returning, transforming or mining.
Totem of Undying	On death, after Drop, summon a fresh copy of the card if a slot is available.	A flag, not a stack of extra lives. Buffs and the consumed Totem do not carry over to the fresh copy.
Negative Attack	A debuff reduces effective Attack and can be cleansed.	Say Reduce ... Attack or Give ... -N Attack; distinguish it from damage.
Well Fed	Healing beyond missing Health increases maximum Health and also fills that increase.	At full Health it can still have a real benefit. Ordinary Heal at full Health does nothing.
Granted keyword	Shield, Sprint or Ranged can be added to eligible board targets.	Ensure the target kind and existing status make the effect useful.

Passives already supported

Passive	Current rule	Best use / risk
Armor	Reduce each incoming damage instance by the configured amount, down to zero.	Strong against repeated small hits; distinguish from temporary extra Health.
Type-filtered aura	Other friendly mobs of the selected type have extra Attack while the source remains.	Does not buff itself; not a permanent Spawn buff. Protecting the source is counterplay.
Grazer	At the end of your turn, if you control a Crop, heal this mob by the configured amount.	Links animals with agriculture without a new resource. Must have enough Crop access.
Battle-hardened	After surviving actual damage, gain Attack, at most once per global turn.	Fully prevented damage is not a trigger. Cheap repeat healing can make it snowball.
Schooling	After you play another Aquatic mob, this gains Attack until the current turn ends.	Playing is not summoning. The bonus is on the listener, not automatically the newly played fish.

Effect maker capability map

CURRENT: Effects resolve in their authored order. Choose a trigger, an action, a target and appropriate filters. Multiple fields that sound similar can refer to different things: eventType filters what caused the event; type filters the recipient; countType filters what is counted.

Trigger	Meaning	Example wording
PLAY	Card played from hand; displayed as Spawn for board cards, omitted on one-shot Items.	Spawn: Draw 1 card.
DROP	Board death; also explicitly called by Mine.	Drop: Add Coal to your hand.
END_TURN	Owner's end of turn while the source remains relevant.	At the end of your turn: Restore 1 Health to your hero.
AFTER_ATTACK	After this mob attacks, or after the hero attacks with the tool.	After your hero attacks: Draw 1 card.
DAMAGE_DEALT	A qualifying damage event by the source; not prevented zero damage.	After this deals damage: Freeze the damaged mob.
ATTACKED	When the source is attacked; useful for explicit thorn damage.	When attacked: Deal 1 damage to the attacker.
HARVEST	Crop reaped through the harvest path. Separate from death.	Harvest: Add Wheat to your hand.
ON_KILL	A qualifying kill credited to the source or tool.	After your tool kills a mob or block: Draw 1 card.
CARD_ADDED	A card successfully enters a hand, including draws and generated cards.	After a card enters your hand: ...
ITEM_PLAYED	An Item is played. Do not assume Enchantment or Tool cards are Items.	After you play an Item: ...
MINED	An Ore is consumed by Mine.	After you mine an Ore: ...
HEALED	Actual healing occurs, including supported Well Fed growth.	After this is healed: ...
DISMANTLE	RETIRED. Old schema/packet identity is reserved; no gameplay action remains.	Do not author new cards with this trigger.

Actions already available

BUFF changes board stats; DAMAGE deals damage; HEAL restores missing Health; WELL_FED permits overhealing; DRAW takes from the deck; GAIN_XP provides spendable XP this turn; SUMMON creates a specified board card; GIVE adds a specified card to hand; GIVE_RANDOM samples a fixed authored card list; BOUNCE returns a board card; TOTEM grants the resurrection flag; INVULNERABLE prevents damage temporarily; FREEZE and WITHER apply their statuses; TOOL_DAMAGE deals damage based on equipped tool Attack; DESTROY_TOOL removes the enemy tool; ENCHANT_TOOL modifies/marks the equipped tool; CLEANSE

removes supported harmful effects; MINE consumes an Ore and pays its Drop; GRANT_KEYWORD adds a supported keyword; TRANSFORM replaces a board card with a new form.

Targeting and event details

Chosen friendly/enemy/any board targets are narrowed with Board kind: Mob, Block or Both. A chosen character target includes either hero, with its board portion narrowed separately. Choose Mob plus the character target for a food card that heals any mob or either hero but not blocks. Chef's Feed follows this distinction. Random enemy can include the enemy hero; it is not synonymous with random enemy mob.

SELF means the source board card or the appropriate hero for tool effects, subject to action restrictions. EVENT refers to the triggering target where supported. Observed event scopes choose friendly, enemy, any or self; self is useful for healing listeners. Do not use self for events with no matching board/hero subject, such as a card entering hand, and expect it to fire. The current validator can accept some configurations that have no useful trigger.

For-each fields multiply supported numeric amounts by a live board count. Count kind, type, side and excluding the source are independent settings. It is not a general expression language: arbitrary comparisons, conditional branches, limits and variable card references are not supported just because they can be written in text. Inspect each action before attaching a count; tool enchant stat changes and tool-derived damage do not automatically become fully general multiplied expressions.

Important boundaries

- Generic Choose one / discover-three is a proposal. Miner's two-option hero power is bespoke and does not prove a generic card choice UI exists.
- Tool Enchantments can attach triggers. Give the Enchantment an ENCHANT_TOOL Play action, including 0/0 for a trigger-only enchantment, then its trigger effects. Replacing/breaking the tool ends that tool's attached effects.
- Transform creates a fresh form, retains the identity needed for its board slot, and does not refresh a spent attack. New Sprint may affect readiness. It is not a buff preserving all statuses.
- Draw and Add can overflow the ten-card hand. Repeated generation engines need limits and hand-pressure testing.
- There are loop guards. They are emergency protection, not permission to design infinite automatic loops.
- A custom sentence cannot implement a once-per-turn cap, a new target restriction, a secret condition or a player choice.

Blocks after Dismantle

DESIGN POLICY: A block should create an interesting decision after it is played. Removing Dismantle makes this a card-design obligation. Paying XP to remove your own weak card was covering up blocks that had already finished their job.

Four useful block shapes

Shape	Example concept	Current support
Ongoing engine	Bookshelf: At the end of your turn, draw 1 card.	END_TURN + DRAW. Very strong; cost and Health need testing.
Passive structure	Banner: Your other Illager mobs have +1 Attack.	Typed Attack aura; blocks can be aura sources.
Defensive hazard	Cactus: When attacked, deal 1 damage to the attacker.	ATTACKED + DAMAGE; no ordinary block retaliation needed.
Consumable resource	Ore pays Drop when mined; Crop pays Harvest when reaped.	Mine and Harvest exist, with distinct trigger paths.

Bookshelf choices

PROPOSAL A, simplest: remove the one-shot draw-two identity and make Bookshelf a modest recurring card source. Keep it fragile enough that the opponent can interact. PROPOSAL B: Spawn draws one card and an ongoing narrow benefit rewards a defined deck. PROPOSAL C, future: two book charges, then remove itself. Charges and generic self-expiry need code; do not imply they already exist.

If a block is only a one-time effect with no ongoing purpose, make that concept an Item instead. If preserving its physical block identity matters, pair the entry effect with a relevant passive or resource payoff. Do not make every block Shield solely to force the opponent to clear it.

Block review checklist

What does this do on my next turn? Why would an opponent spend an attack or removal on it? Can I use its payoff myself? How often does it strand a board slot? Does its Health produce a real interaction window? Could a deck fill all seven slots and become unable to progress? Can two copies compound into an oppressive engine? Remove or redesign any block with no convincing answers.

Class identities

PROPOSAL FRAMEWORK: Give each class two primary strengths, one supporting strength and at least two weaknesses it cannot erase cheaply. Neutral cards should provide basic playability without replacing a class's distinctive payoff. Classes share core rules; their incentives, resource flow and efficient answers should differ.

Class	Primary plan	Distinct resource / constraint	Deliberate weakness
Fighter	Combat trades and tools	Tool durability, damaged survivors, kill rewards	Limited broad healing and passive long-game engines
Builder	Defensive board engines	Board space and vulnerable structures	Slow conversion of defense into lethal damage
Farmer	Crop growth and harvest	Timing harvest against keeping Crops in play	Setup can be disrupted; weak instant removal
Fisherman	Catch generation and Aquatic tempo	Hand additions and sequencing fish	Weak unconditional hard removal; hand overflow
Alchemist	Potions and controlled bursts	Item sequencing, preparation and finite resources	Fragile board, weaker sustained tools
Miner	Invest in Ore, convert it into tools/value	Board investment followed by mining	Delayed payoff; resource hands can lack interaction
Chef	Sustain a surviving board	Real healing, Health growth and food	Must establish bodies; limited burst damage
Tamer	Companions and board development	Small bodies, type support and upgrades	Board clears; weak independent face burn

Eight classes change the set arithmetic

The catalogue still records a Foundation target of 180. The earlier 90 Neutral + three classes x 30 plan does not cover eight classes. Eight x 30 + 90 Neutral would be 330 collectible cards. This guide does not silently change the target. A practical 180-card first pass is 60 Neutral + 15 per class; expand only after each class has a coherent playable deck. Alternatively retain 30 per class and formally choose a larger launch set. Tokens are additional definitions, not collectible slots.

Fighter

CURRENT POWER: Craft costs 2 XP, once on your turn, and equips a 1 Attack / 1 Durability Wooden Sword, replacing the existing tool. Tools let your hero attack; it still uses Health when taking ordinary retaliation unless the tool's rules prevent it.

DESIGN IDENTITY: Win board trades, then turn surviving attackers and remaining tool durability into pressure. The question should be which trade advances my plan, not how much unavoidable face damage can I chain.

Strengths: efficient single-target combat, useful tools, on-kill enchantments and resilient attackers. Supporting theme: Illager formations and Battle-hardened survivors. Weaknesses: broad recovery, endless hand generation and efficient answers to everything without attacking. Hero Health is a combat resource; do not give Fighter every healing tool it needs for free.

Suggested packages

- Tool combat: two dependable low/mid-cost tools, one premium tool, a small number of enchantments, and mobs that still work when no tool is drawn.
- Illager pressure: early Illagers, one typed aura and a payoff for maintaining the board. Keep Ranged Pillagers fragile.
- Survivors: Battle-hardened on a modest body plus carefully priced protection. Avoid repeating free self-damage/heal loops.

Card concepts, not new shipped cards

Looting: attach an on-kill card-generation effect to a tool. Fire Aspect: add a modest after-damage effect, with explicit targets. Weapon Rack: choose one of three tools is attractive, but requires generic choice support. A current-code alternative adds a random tool from a short list; this is a different experience and must say random. Shield Bash could reward an existing defensive board, but a count based on keyword rather than type needs additional filtering support.

Legendary proposals: Raid Captain, an Illager aura leader with a clear vulnerable body; Veteran Weaponsmith, a powerful tool/enchantment payoff that does not require a new resource. Do not make a class playable only after drawing its Legendary.

Builder

CURRENT POWER: Build costs 2 XP, once on your turn, and summons a 0/2 Cobblestone Wall with Shield. Requires a board slot.

DESIGN IDENTITY: Assemble structures that protect a modest engine and convert time into a board advantage. Builder should care about what occupies each of its seven slots more than any other class.

Strengths: defensive blocks, Health support, Shield granting and persistent auras. Supporting theme: Golems, redstone, repairs and Villager infrastructure. Weaknesses: burst damage and cheap repeated card generation. Its payoffs should be interactable; a collection of invulnerable engines is frustrating rather than clever.

Suggested packages

- Fortifications: a few Shield blocks, one repair effect and mobs that supply the actual win condition.
- Workshop engines: one or two structures with different jobs, not five versions of draw every turn.
- Golem support: resilient neutral bodies plus a class payoff; remember one current type per card.

Card concepts

Bookshelf becomes ongoing support or an Item-like one-shot concept. Redstone Torch can be an Attack aura source. Dispenser is a visible end-turn damage engine. Piston is board disruption through returning a target. Scaffolding as a temporary discounted slot or replacement structure needs new rules; keep it as a proposal. Repairing blocks should increase Health or heal, not grant useless Attack.

Legendary proposals: Master Architect, a large but removable structure-support mob; Ancient Golem, a board-stabilizing threat whose value is visible and finite. Avoid a Legendary that makes all friendly blocks untargetable or permanently invulnerable.

Farmer

CURRENT POWER: Sow / Reap costs 2 XP per use, once on your turn. Sow summons 0/2 Wheat and prepares Reap. Reap removes your Crops, runs each Harvest effect and draws a card for each. With no Crops available the power returns to Sow. Harvest does not run Drop.

DESIGN IDENTITY: Choose when to cash in the farm. Crops are useful while growing, but harvest provides the payoff. Animals and Villagers support the engine rather than replacing it.

Strengths: sustained board growth, Crop generation and delayed card advantage. Supporting theme: Grazer Animals and targeted buffs. Weaknesses: immediate large removal and burst face damage. The opponent should be able to damage the farm before it pays out.

Suggested packages

- Crop cycle: cheap Crop access, one meaningful Harvest token, one payoff for controlling Crops and one for actually reaping them.
- Grazing herd: Animals recover while a Crop remains, creating tension with harvesting all Crops.
- Hoe combat: a tool plants Crops on an appropriate event. Verify slots before rewarding every kill with another block.

Card concepts

Iron Hoe: After your tool kills a mob or block, summon Wheat. Seed Store: a modest Crop generator. Composter: buff an actual mob, not a random block. Bone Meal: explicit mob +1/+1 or block +2 Health branches. A Crop with an ongoing benefit plus Harvest reward creates a real timing decision. A growth-stage mechanic could be appealing later; current generic multi-turn counters are not provided.

Legendary proposals: Ancient Sniffer, a finite burst of distinctive Crop resources; Master Farmer, a visible farm engine with a fair removal window. Do not double all Harvest effects indiscriminately before testing draw loops and full hands.

Fisherman

CURRENT POWER: Fish costs 2 XP, once on your turn, and adds a 1-XP 1/1 Caught Cod token to your hand. It generates a card rather than immediately summoning it. Full-hand restrictions matter.

DESIGN IDENTITY: Build a hand of catches, then sequence Aquatic mobs for a temporary tempo turn. The resource is the catch entering your hand, not an invisible fishing meter.

Strengths: predictable generation, Aquatic support and temporary Attack bursts. Supporting theme: fishing tools and fixed catch tables. Weaknesses: reliable hard removal and durable solo threats. Avoid making every generated catch also draw from the deck; the class should pay something for its resource flow.

Suggested packages

- Schooling: modest Aquatic listeners plus enough cheap fish to activate them. Playing an Aquatic from hand matters; mass summon is different.
- Catch engine: a card-added listener plus a fishing tool that generates from a small pool. Include the actual pool in inspect/reference.
- Coastal control: a few defensive Aquatics and carefully priced Freeze, without copying Alchemist's whole removal kit.

Card concepts

Luck of the Sea: attach a fixed-list random Give trigger to a rod. Fishing Net: a finite batch of small catches. Shoal Leader: Schooling on a fragile body. Treasure Catch: a rare generated utility item, not an unrestricted random collectible. Guardian can be a ranged defender with modest Attack and a meaningful weakness; do not automatically combine Ranged, Shield and strong control.

Legendary proposals: Old Sea Angler, a catch-table payoff; Elder Guardian, an expensive Aquatic stabilizer with limited control. Card-added triggers can observe both drawing and generation; if the design means catches only, the engine needs a more specific event filter or a deliberate type restriction.

Alchemist

CURRENT POWER: Brew costs 2 XP, once on your turn, and adds a 0-XP Minor Harming Potion that deals 1 damage to an enemy mob or block. It is not unrestricted face damage.

DESIGN IDENTITY: Prepare and combine potions to solve a board problem. The exciting turn is a sequence of finite Items, not a permanent freeze lock.

Strengths: direct board damage, negative Attack, Freeze and Item-played synergies. Supporting theme: fragile Witch / brewing engines and selective mobility through Sprint. Weaknesses: durable minion curves, efficient weapon combat and large repeatable healing.

Suggested packages

- Potion control: small targeted damage, one area-damage option, one debuff and a limited resource engine.
- Item sequencing: a fragile listener rewards playing Items. Give it a modest payoff and test the 0-XP potion chain.
- Brewing support: a block that continues doing something after Spawn. Hand overflow and the cost of occupying a slot are real constraints.

Card concepts

Splash Harming: damage enemy mobs and blocks; explicitly state hero exclusion. Potion of Weakness: negative Attack that Cleanse can remove. Potion of Swiftness: give a mob Sprint. Brewing Stand: ongoing potion generation with carefully chosen Health. Lingering Cloud as a timed area effect would need duration/zone support; use an ordinary block engine only if that difference is acceptable.

Legendary proposals: Master Brewer, a finite potion choice/catch payoff (choice needs code); Coven Witch, an Item-played engine with a hard, implemented cap if the design calls for one. Do not rely on custom text to enforce once per turn.

Miner

CURRENT POWER: Excavate costs 2 XP, once on your turn. Choose to mine a friendly Ore, consuming it and triggering its Drop, or equip a 1 Attack / 2 Durability Wooden Pickaxe. The tool option works without an Ore. Mining is not attacking, does not take ordinary retaliation and does not trigger Totem resurrection.

DESIGN IDENTITY: Put value into visible Ore, then convert it into spendable resources or improved tools. This is investment and conversion; Builder is persistence and defense.

Strengths: Ore payoffs, tools, mining events and resource conversion. Supporting theme: for-each Ore amounts and tool durability. Weaknesses: immediate pressure, resource-only hands and removal before conversion. Do not make the class require an Ore, a pickaxe and an enchantment just to take an ordinary turn.

Suggested packages

- Mining loop: enough playable tools and Mine access to support the Ore count. Test hands with Ore but no tool, and tool but no Ore.
- Refinement: Coal as temporary XP, Gold as cards, Iron/Diamond as tool improvements. Each resource should have a distinct use.
- Investment payoff: a moderate reward when you mine, plus one payoff for choosing to keep Ore on the board.

Card concepts

Stone Pickaxe: after attacking, mine an eligible Ore through its configured target behavior. Ore-rich effects count Ore blocks, not arbitrary board cards. Furnace / blast-furnace ideas can convert resources over time; a generic inventory crafting recipe is not already a match mechanic. Silk Touch returning an Ore instead of paying Drop is different from Mine and may need a custom rule.

Legendary proposals: Deep Delver, a strong but finite mining payoff; Ancient Forge, a tool-support engine with an exposed board slot. Keep Legendary rewards from simply generating more Ore forever. No additional Miner cards were added as part of this reference work.

Chef

CURRENT POWER: Feed costs 2 XP, once on your turn, and restores 2 Health to any mob or either hero. Blocks are excluded. Ordinary full-Health healing has no effect.

DESIGN IDENTITY: Keep an established board alive, then turn real healing into useful growth. Chef rewards careful trades and feeding survivors, not endless passive hero healing.

Strengths: efficient healing, Health buffs and real-heal listeners. Supporting theme: Villagers, food Items and Well Fed. Weaknesses: burst removal and rebuilding an empty board. Health by itself should not become a universal win condition.

Suggested packages

- Sustaining board: sturdy early mobs with modest Attack, food and one healing payoff.
- Feast: limited Well Fed effects let healing matter at full Health. Price their permanent growth separately from ordinary healing.
- Village kitchen: Villager support with distinct jobs, avoiding every Villager merely granting more Health.

Card concepts

Cooked Porkchop: restore a clear amount to a mob or hero. Milk Bucket: Cleanse an explicitly eligible target. Village Cook: a simple heal-on-Spawn body. Hearty Stew: a larger finite recovery effect. An after-healed listener gains modest Attack or generates a food card, but test loops if generated food heals the listener again.

Legendary proposals: Village Head Chef, a finite feast payoff; Mooshroom Matron, a food engine tied to board presence. Never make required basic healing inaccessible behind a Legendary. Chef is not obliged to copy every Priest mechanic; theft and resurrection would add identities the current class does not need.

Tamer

CURRENT POWER: Call Pup costs 2 XP, once on your turn, and summons a 1/1 Wolf Pup. Requires a board slot.

DESIGN IDENTITY: Establish companions, protect a few of them, and upgrade a small board into meaningful attackers. Tamer's identity is caring for persistent allies, not treating every creature as disposable face damage.

Strengths: companion generation, Tameable auras and transformation/upgrades. Supporting theme: Animals, bones, fish and saddles. Weaknesses: board clears, full-board congestion and limited independent damage from hand.

Suggested packages

- Pack: pups plus a modest Tameable Attack aura. The aura is vulnerable and does not buff itself.
- Training: targeted buffs and a pup-to-wolf transform. Transform is a fresh form, not an extra attack reset.
- Utility companions: Cat, Parrot or Allay concepts supply different support roles. Their real Minecraft labels do not force all of them into the same current type field.

Card concepts

Pack Leader: your other Tameable mobs have +1 Attack. Bone: a small targeted companion buff. Training Whistle: a transform into a defined Wolf token. Stable: ongoing support that does not simply fill every slot with pups. A pet bond, adjacency rule or mount system would need extra code; do not introduce three such systems into Foundation.

Legendary proposals: Ancient Pack Leader, a powerful but removable aura body; Loyal Companion, a unique transform line with clear token inspection. Avoid a win condition that requires a randomly generated specific pet.

Tribes and cross-class synergies

CURRENT: The type field is single-valued. Type names are design categories, not a complete biological taxonomy. PROPOSAL: Keep each supported tribe dense enough for a deck and allow neutral cards to bridge two class plans through effects rather than inventing many tiny unsupported tribes.

Type	Natural design hooks	Classes / bridges	Main risk
Animal	Grazing, food, modest stats, companions	Farmer, Chef, Tamer	Becoming generic buffs with no reason to choose the tribe
Undead	Drops, persistence, damage over time	Neutral foundation; selected class support	Free recurring value and excessive Withered
Arthropod	Small swarms, webs, fragile control	Neutral, limited Alchemist support	Too few members for a full package
Villager	Cooperation, repair, trade, food	Builder, Farmer, Chef	Every support body stacking the same buff
Illager	Formation, tools, aggressive trades	Fighter	Ranged plus defensive stacking
Ender	Return, transform, displacement	Neutral premium utility	Repeated bounce denying play
Nether	Tough bodies, drops, dangerous resources	Fighter / Alchemist touches	Theme-only grouping with no actual synergy
Golem	Durable protection and construction	Builder	Defensive stalls without a win condition
Slime	Splitting and small-body generation	Neutral	Seven-slot congestion; free repeated death value
Crop	Harvest and grazing conditions	Farmer, food bridge to Chef	Dead block slots without harvest access
Aquatic	Schooling, catches, temporary pressure	Fisherman	Ambiguous overlap with Undead Drowned
Ore	Mine and conversion	Miner	Too much investment, too few ways to cash in
Tameable	Pack auras and training	Tamer	Assuming Animal and Tameable are both on a card

For a modest tribal package, begin with several independently playable members, two enablers and one or two payoffs across useful XP costs. This is a testing heuristic, not a guaranteed ratio. A payoff with no supporting early game is a trap card. Rare types can remain flavorful without forcing a full deck archetype in Foundation.

Neutral foundation ideas

PROPOSALS ONLY. These are roles and Minecraft hooks, not final balanced cards. Costs and stats require testing against class tools and powers. Neutral cards should teach common game patterns, provide ordinary curve bodies and offer limited interaction. They should not supply the strongest version of every class ability.

Baseline board roles

Concept	Simple role	Design guardrail
Pig	Low-cost plain Animal	A readable baseline for comparing buffs.
Cow	Solid early Animal	Optional Grazer variant belongs in a deliberate package.
Sheep	Low-Attack durable Animal	Health matters without adding a paragraph.
Chicken	Cheap fragile body	Do not automatically add a free draw.
Rabbit	Fast board-trading body with Sprint	Poor face pressure on the summon turn.
Wolf	Mid-cost plain companion	Differentiate from Wolf Pup and class payoffs.
Zombie	Ordinary Undead with a small food Drop	Account for the resource in its cost.
Skeleton	Fragile Ranged attacker	Keep the new defensive weakness visible.
Spider	Plain efficient board attacker	Avoid copying Sprint onto every agile mob.
Cave Spider	Small debuff attacker	Withered is stronger than a cosmetic poison theme.
Villager	Neutral baseline support body	One clear subtype makes tribe access legible.
Iron Golem	Expensive defensive body	Avoid making every class's defense equally efficient.
Snow Golem	Fragile control body	Repeated Freeze needs strict balance.
Slime	Finite split into smaller tokens	Test board space and repeated Totems.
Magma Cube	More aggressive split variant	Different role, not merely larger Slime.
Turtle	Durable slow body	A defensive option without endless healing.
Goat	Mid-cost trading body	A push/adjacency mechanic would need code.
Polar Bear	Sturdy late midgame body	Vanilla stats can be useful; not every card needs text.
Panda	A second stat-distribution benchmark	Avoid random personalities in the first set.
Ravager	Large plain finisher	A fair comparison point for complicated top-end cards.

Interaction and resources

Concept	Simple role	Design guardrail
Arrow	Small single-board damage Item	State mob/block and hero exclusions.
Snowball	Modest Freeze or debuff Item	Repeated cheap freeze can prevent counterplay.
Milk Bucket	Cleanse	Does not mean remove every positive ability.
Bread	Small hero or board heal	Specify targets; weaker than Chef's best food.
Cooked Porkchop	Larger food heal	The any-mob-or-hero configuration is supported.
Golden Apple	Premium temporary protection	Permanent Health and invulnerability are different.
Ender Pearl	Return a board target	Tokens vanish under current return rules.
Lava Bucket	Tool destruction	Tech should have a cost in tool-free matchups.
Shield	Defensive support or tool theme	A held shield system is not automatically supported.
Experience Bottle	Temporary XP	Watch early power spikes; does not raise permanent max XP.
Bundle	Card draw/generation theme	Do not assume it can preserve chosen cards without code.
Compass	Predictable resource selection	Generic search/tutor is a proposed action.
Map	Small draw effect	Keep simple; biome gameplay can wait.
Fishing Rod	Limited catch generation	Keep Fisherman's strongest fishing rewards class-specific.
Shears	Utility interaction theme	Choose an actual supported effect, not vague shear text.
Totem of Undying	One resurrection flag	Cannot stack extra lives by repeating the buff.

Blocks with a continuing job

Concept	Simple role	Design guardrail
Cactus	Damage attackers	Does not need Attack or normal retaliation.
Sweet Berry Bush	Small defensive thorn block	Make it distinct from Cactus in cost/role.
Campfire	Small ongoing recovery	Broad automatic healing should not erase Chef's identity.
Furnace	Slow recurring support	Keep the payoff tied to an explicit event.
Bookshelf	Fragile value engine	Remove its dead-slot problem instead of restoring Dismantle.
Lantern	Modest support aura	No invented vision rule in the foundation set.
Beehive	Finite token/Drop concept	Unlimited end-turn summons easily clog the board.

Concept	Simple role	Design guardrail
Chest	Clearly defined delayed resource	Pure Spawn value needs a second continuing purpose.
Redstone Torch	Visible board aura	Attack auras do not grant blocks useful Attack.
Piston	Return-on-Spawn plus a later job, or an Item concept	A one-shot permanent needs a reason to remain.
TNT	Delayed damage concept	Generic countdown/self-expiry needs implementation.
Beacon	Expensive aura payoff	Symmetric-looking art must not imply symmetric rules.

Neutral Legendary direction

Keep only a few broad, memorable threats initially. Ender Dragon can be a large finisher with a finite Drop; Wither can pressure both boards with an explicit cost; Warden can clear a constrained board. None should be the automatic best card for every deck. Class Legendaries should express a plan; Neutral Legendaries should offer a distinctive alternative, not fill every class weakness at once.

Minecraft systems as card inspiration

PROPOSALS. Each row translates a recognizable Minecraft loop into a possible card decision. The implementation notes prevent attractive themes from becoming misleading Workshop text.

Minecraft system	Card-game translation	Foundation approach
Mining and ore	Invest now, mine later, receive a material	Already supported through Ore, Mine and Drop.
Smelting	Convert one resource into a stronger output	Fixed Give/trigger approximation works; general recipes need code.
Crafting	Combine useful parts into a tool	Avoid a second inventory grid; a fixed payoff is easier to teach.
Tool durability	Limited attacks and enchantment investment	Supported; creates a natural time limit.
Repair and Mending	Preserve a tool or restore board Health	Tool stats can increase; damage-repair semantics must be explicit.
Farming	Grow value, harvest at a chosen moment	Crops and Harvest already create a Minecraft-specific decision.
Bone meal	Accelerate growth or buff living things	Separate mob Attack buffs from block Health.
Composting	Turn surplus into future fertility	Generic discard/sacrifice costs are not fully supported.
Fishing	A bounded catch table feeding your hand	Fixed-list random Give exists; show the pool.
Breeding	Spend food to generate a smaller companion	Summon exists; exact two-parent checks need code.
Taming and training	Invest in one companion; transform it	Transform and typed auras exist.
Food and hunger	Recover after trades, maintain survivors	Use Health first; a second hunger resource can wait.
Brewing	Prepare small effect Items	Item-played triggers exist. Avoid giant random potion pools.
Splash versus lingering	Immediate area damage versus an ongoing engine	Area targets exist; generic timed zones do not.
Enchanting	Improve a specific tool and attach a behavior	Supported, with readable inspect information.
Redstone signals	A structure reacts to a repeated event	Use existing triggers; signal networks/adjacency can wait.
Pistons	Return or reposition	Return exists; positional relocation is not an established rule.
Hoppers	Transfer resources between places	Fixed Give/Draw is simpler than a new storage inventory.
Dispensers	Repeat a small visible effect	End-turn damage exists.

Minecraft system	Card-game translation	Foundation approach
Observers	Respond to another event	Current event filters are limited; no universal event system in UI.
Copper oxidation	A card changes as time passes	Stage/age counters need additional implementation.
Waxing and scraping	Preserve or revert a transformation stage	Save for an expansion with visible stages.
Weather and lightning	A dramatic transformation or shared condition	Transform exists; global weather gameplay is proposed.
Day and night	Different timing for mobs	Prefer ordinary turns initially; global cycle adds rules.
Light and darkness	Reveal, protect or suppress threats	A visibility system needs new mechanics, not merely a tooltip.
Biomes	Board appearance and themed NPC decks	Keep cosmetic for Foundation as agreed.
Villager professions	Distinct support roles and tradeoffs	Good class/tribe identity without a new currency.
Trading and bartering	Exchange a finite resource for a bounded result	Explicit generated cards work; general exchange costs need code.
Raids	Waves of coordinated Illagers	Summon and typed aura work; wave counters require support.
Trials and omens	Visible challenge for a later payoff	Good expansion space; objective tracking needs code.
Portals and dimensions	Access a thematic pool or move a card	Avoid extra zones in the first set.
Teleportation	Return/transform/disrupt	Specify the exact action; teleport is flavor, not a rules verb.
End crystals	Vulnerable support structures	A removable aura source makes intuitive counterplay.
Sculk and vibrations	React to attacks or deaths	Current event coverage is narrower than every vibration source.
Souls and resurrection	Drop and Totem interactions	Fresh copies and finite triggers are easier to reason about.
Slime splitting	Replace one body with several small bodies	Summon-on-Drop works; test the seven-slot cap.
Explosions	Damage several targets, perhaps including your own	Current area damage is supported. State friendly damage explicitly.
Knockback and wind	Interrupt or return an enemy	Actual board movement/adjacency needs rules first.
Mounts and transport	Carry or upgrade a companion	Transform is a simple approximation, not a full passenger system.
Exploration and maps	Resource discovery or delayed draw	Avoid random generated text; use fixed pools.
Storage and bundles	Bank future resources	Additional reserve zones are an expansion idea.
Music, horns and banners	Short buffs or tribal auras	Named theme can be expressive without a new keyword.

Minecraft system	Card-game translation	Foundation approach
Sleep and beds	Recovery with lost tempo	Generic skip-turn costs need code; ordinary Heal is simpler.
Fluids and buckets	Remove, protect, convert or spread effects	Keep targets finite; flooding a whole board is a new system.
Powder snow and ice	Freeze and vulnerability	Do not combine cheap repeat freeze with large safe attackers.
Honey and slime	Sticky control, healing, splitting	Decide one precise behavior per card.
Archaeology	Uncover a bounded reward	Fixed-list Give works; staged excavation is proposed.
Structures and treasure	Authored encounters and rare rewards	Strong world progression without extra match complexity.
Advancements and mastery	Reward learning a class	Keep match strength independent from account level.

Tools, equipment and enchantment roles

VANILLA INDEX lists every actual item ID later. This chapter groups their design uses. A Minecraft item can become a Craftbound Item, Tool, Enchantment or depicted art; it does not have to inherit the same combat behavior.

Family	Minecraft objects	Suggested class ownership
Melee weapons	Swords, axes, mace, spears	Fighter primary; other classes get narrow utility tools.
Mining tools	Pickaxes, brush	Miner primary; excavating and Ore conversion.
Farming tools	Hoes, shovel, shears	Farmer primary; planting and harvesting themes.
Fishing gear	Fishing rod, trident, nets as proposed concepts	Fisherman; trident may be combat or resource support.
Ranged weapons	Bow, crossbow, arrows	Fighter / Fisherman accents; preserve Ranged weakness.
Cooking implements	Knife and utensils as original Craftbound concepts	Chef; invented objects must not be labeled vanilla registry items.
Alchemical implements	Brewing stand, blaze rod, bottles	Alchemist; fragile tool or block support.
Companion equipment	Bone, saddle, lead, horse armor, wolf armor	Tamer; target protection and growth.
Construction equipment	Hammer as an original concept, axe, shovel	Builder; repairs and structure support.
Protective gear	Shield, helmets, chestplates, leggings, boots	Usually Items/buffs unless a separate equipment slot is implemented.
Mobility	Elytra, boat, minecart, ender pearl	Sprint/return/transform approximations; not free extra turns.
Containers	Buckets, bottles, bundles, chest boats	Resource generation or utility; target wording matters.

Vanilla material tiers are useful visual vocabulary, not a command to print seven nearly identical cards for every tool. Choose a few meaningful steps per class. Keep enchantment ownership class-specific where it reinforces identity: Looting and Fire Aspect for Fighter, Efficiency/Fortune for Miner, Luck of the Sea for Fisherman. Cross-class access should be intentional rather than a neutral catch-all.

Enchantment translation examples

Sharpness becomes Attack; Unbreaking becomes Durability; Looting becomes a kill reward; Fire Aspect becomes a damage-triggered effect; Fortune becomes a mining reward; Luck of the Sea changes or rewards catches. Mending could repair through a healing/event relationship, but if it requires spending XP automatically the cost must be coded. Silk Touch, Loyalty, Channeling and Multishot need exact rules, not merely their vanilla names.

Avoid bonus-text overload: if an Enchantment adds a trigger, inspect the tool should show the trigger, not just an Enchanted title. Cosmetic Enchanted finish must remain distinguishable from gameplay enchantments.

Candidate keywords and mechanics

PROPOSALS ONLY unless noted. The foundation should probably introduce at most one or two additional named terms after testing the existing ones. A memorable Minecraft name is useful only if the underlying rule is clear and repeated.

Candidate	Concise definition concept	Support / recommendation
Harvest	An effect when this Crop is reaped.	Trigger already exists. Good candidate for consistent bold label and glossary.
Mine	Consume a friendly Ore and trigger its Drop.	Action already exists. Keep separate from attacking and death.
Thorns	When attacked, deal N damage to the attacker.	Authored through ATTACKED/DAMAGE; could become a short named keyword later.
Grazer	At your turn's end, heal this if you control a Crop.	Passive exists. Keep full wording until enough cards use it.
Battle-hardened	Gain Attack after surviving damage, once per turn.	Passive exists. Specify N and global-turn limit.
Schooling	Gain temporary Attack when you play another Aquatic.	Passive exists. Excellent sequencing theme; explain recipient.
Well Fed	Excess healing raises maximum Health.	Action exists. Define exact interaction with heal triggers.
Choose one	Select one listed effect when played.	Generic card UI/rules not yet implemented; high-value next feature.
Catch	Add a card from a specified fishing pool.	Fixed-list Give exists; do not hide an enormous pool behind a word.
Repair	Restore Health or Durability to a stated target.	Board healing/tool stat gain exist, but these are different operations.
Growth	Advance a Crop through visible stages.	Needs counters and timing rules. Save for later.
Fuse	After a stated number of turns, explode.	Needs duration/countdown support. Not the PvP timer.
Stock	A block has a limited number of uses then expires.	Useful block solution, but charges/self-expiry need code.
Trade	Pay a stated resource for a stated reward.	General alternate costs need code.
Bond	A chosen companion and source share a relationship.	Needs persistent links and loss rules. Too much for initial Foundation.
Ambush	A hidden or delayed response.	Needs hidden-state and reaction timing; defer.
Biome	Shared location affecting cards.	Keep cosmetic for now; gameplay biomes are an expansion system.
Silence	Remove abilities and statuses.	Not equivalent to current Cleanse; requires explicit implementation.

Keyword balance review

Shield and Sprint are familiar but useful because they communicate important targeting/readiness rules quickly. Ranged's new counterplay makes it a more interesting design space, but low-cost high-Attack Ranged still needs testing. Spawn is reliable immediate value; keep body stats honest. Drop forces trading decisions but becomes oppressive with repeated resurrection. Cleanse is a narrow answer, not universal text erasure. Block should be presented as a kind, even while the internal storage uses a keyword.

Prefer Minecraft's resource loops over keyword renaming as the source of originality: crops versus harvest, Ore versus mining, catch tables feeding a hand, tools that wear out, and enchantments that alter a specific tool. These change decisions more than adding a new word for charge or lifesteal.

Building and testing the set

PROPOSAL PROCESS: Build one playable archetype per class before adding a second. Give each deck a way to contest the early board, a midgame plan, interaction, a finite resource plan and a way to end the game. A beautiful class identity document cannot compensate for a deck full of unspendable resources.

Suggested 15-card class starting allocation

For a smaller first pass: eight mobs/blocks, three Items, two Tools and two Enchantments is one possible allocation. Adapt it by class: Miner needs enough tools and Mine access; Builder needs enough attackers; Alchemist can trade some board slots for Items. Do not force identical kind counts if that destroys identity. The current 30-card deck requirement makes neutral support essential.

XP and rarity

Do not distribute costs and rarities evenly merely for a tidy graph. A working curve usually needs more cheap/mid-cost cards than expensive finishers. Keep enough Commons and Rares to build a functioning deck; use Epics for narrower build-arounds and one or two Legendaries per class only when the total set size supports them. Rarity is not permission for strictly superior rate.

For a 30-card test deck, try a starting curve such as 4 at 1 XP or below, 7 at 2, 6 at 3, 5 at 4, 4 at 5 and 4 at 6 or above, then change it to suit the plan. This is an illustrative baseline, not a balance verdict. Measure how often hands have meaningful legal plays at each turn.

Playtest questions and measures

- Opening hands: how often are there no useful plays before turn three? Separate unlucky draws from structural lack of low-cost cards.
- Resource mismatch: Ore without Mine, enchantments without tools, healing without damaged targets, tribal payoffs without tribal members.
- Board health: how often do blocks strand slots? How often does seven-slot congestion stop both players progressing?
- Interaction: can the opponent remove an engine before it pays repeatedly? Does Freeze prevent play for several turns?
- End conditions: how often are wins earned through board decisions versus unavoidable hand burst or fatigue stalls?
- Economy: compare draw versus generation, Health versus healing, and one-shot buffs versus removable auras.
- Readability: ask a player to predict an effect before playing it. A wrong prediction caused by text is a defect even when the code is consistent.
- Abuse cases: Totem plus Drop, free Items plus Item-played, card-added chains, Well Fed plus healed, and mining feedback loops.

Record deck list, catalogue revision, first/second player, turn count, result, stuck turns and misunderstood text. Swap sides and run enough matches to identify repeated patterns. AI simulations are useful smoke tests, not proof of competitive balance; AI target selection can bias results.

World progression and NPC decks

CURRENT: Mastery exists per class, with levels and rewards; it does not alter match stats. Keep that principle. PROPOSAL: award cosmetic backs, titles and authored starter upgrades instead of permanent in-match stat bonuses. Keep card access transparent so new players can learn a class without a rare-card gate.

PROPOSAL: Author NPC decks around one clear lesson: Shield targeting, preserving a tool, harvesting at the right moment, or interrupting an engine. Add biome flavor through card choice and the board appearance, not unexplained combat bonuses. Difficulty should come from coherent lists and better decisions before giving an NPC hidden resources. Ranked play, encounter progression and card grading can wait until rules, reconnect/pause behavior and catalogue consistency are stable.

Editing workflow and safeguards

Use Automatic description while building effects. The Workshop preview and game generate wording from the same structured rules. Custom description is only presentation: it does not change gameplay. Save in the locally launched Workshop writes the development run/config/craftbound/cards.json; Save as exports a copy. Reload the catalogue between matches with the existing command. A separately installed client/server uses its own config directory; saving the development file does not magically update a friend's server.

Before the Foundation replacement, back up the active catalogue. Keep stable IDs and existing order. New cards append. The deletion flag retires a card without reusing its number. Do not change an existing card's protected kind/token identity to force a new design into it; create a new identity when required. Keep token references valid and inspect the linked-to list before retiring a generated token.

The included current-card appendix is a snapshot of the bundled catalogue. Your active development catalogue contained one extra definition at extraction time; it has not been overwritten. Use the live Workshop to inspect your custom cards. The full vanilla index is inspiration, not an import that adds thousands of cards.

A practical build order

- Write a one-line identity and two weaknesses per class.
- Choose a manageable total set size and a small supported keyword vocabulary.
- Build neutral curve bodies and simple interaction first.
- Build each class's enablers before its payoffs. Verify tools, Crops, Ore and catches actually connect.
- Give every block an ongoing job or a supported consume/payoff path.
- Review every generated sentence against targets, timing, duration and limits.
- Test real decks, then add Epics and Legendaries to deepen a working plan.
- Ship a versioned catalogue and keep a short balance-change log.

Source notes and coverage

The exact vanilla indexes are extracted from the locally installed Minecraft 26.3 common/client jars and BuiltInRegistries. Item/block overlap is intentional: an item is not always a block, and a block does not always have an inventory item. English display names come from the matching game's language data, with a readable identifier fallback. Entity categories are the game's registry categories, not a complete hostile/passive classification and not Craftbound tribes.

Craftbound rules were checked against CardCatalog, CardEffects, Match, HeroPowers, Keyword, MobType, MasteryProgress and the bundled cards.json. The Workshop model is used to generate the current-card appendix. Code and custom catalogues may evolve after this snapshot; the live editor remains authoritative for the current file.

Official version context: https://www.minecraft.net/en-us/article/minecraft-java-edition-26-3 Official brewing background: https://www.minecraft.net/en-us/article/taking-inventory--potion

The creative proposals in this guide are original card-design suggestions informed by those game objects and the project's implemented rules. They are not descriptions of vanilla Minecraft behavior, tested balance claims or a commitment to implement every listed mechanic.

Vanilla status effects

VANILLA INDEX: all 40 registered status effects. Category is extracted from the game. The last column is a proposed Craftbound translation, not a full description of the vanilla effect. Status effects are not all obtainable as brewed potions.

Effect / ID	Game category	Card inspiration (proposal)
Speed speed	Beneficial	Temporary Attack or Sprint; do not grant an extra attack unless coded.
Slowness slowness	Harmful	Freeze or reduce Attack; choose one exact rule.
Haste haste	Beneficial	Mine payoff or tool Durability; separate from extra hero attacks.
Mining Fatigue mining_fatigue	Harmful	Delay or weaken tool use; a direct debuff to tools needs support.
Strength strength	Beneficial	A clear Attack buff to a mob.
Instant Health instant_health	Beneficial	Restore a fixed amount of Health to named targets.
Instant Damage instant_damage	Harmful	Deal a fixed amount of damage; specify hero eligibility.
Jump Boost jump_boost	Beneficial	Sprint-themed mobility, not an implied bypass of Shield.
Nausea nausea	Harmful	Avoid randomizing player controls; use a bounded card effect instead.
Regeneration regeneration	Beneficial	A modest end-turn healing engine.
Resistance resistance	Beneficial	Armor or Health; these have different behavior.
Fire Resistance fire_resistance	Beneficial	Narrow damage immunity would need damage-type rules.
Water Breathing water_breathing	Beneficial	Aquatic support or a survival buff.
Invisibility invisibility	Beneficial	Stealth/untargetable needs additional targeting rules.
Blindness blindness	Harmful	Do not conceal essential UI; a precise Attack reduction is clearer.
Night Vision night_vision	Beneficial	Reveal/search is a future mechanic, not existing effect text.
Hunger hunger	Harmful	A resource tradeoff; alternate costs need explicit code.

Effect / ID	Game category	Card inspiration (proposal)
Weakness weakness	Harmful	Negative Attack, removable by Cleanse.
Poison poison	Harmful	Do not call Withered poison if timing and lethality differ.
Wither wither	Harmful	The current Withered status is the direct analogue; heroes excluded.
Health Boost health_boost	Beneficial	Increase maximum and current Health through a buff.
Absorption absorption	Beneficial	Temporary Health/shields need distinct tracking if they expire.
Saturation saturation	Beneficial	Food/healing or XP recovery, with an explicit target/resource.
Glowing glowing	Neutral	Reveal or mark a target; extra marked-damage systems need code.
Levitation levitation	Harmful	Freeze-like lost attack opportunity, if that is the actual rule.
Luck luck	Beneficial	Change a fixed loot/catch pool rather than hidden probability boosts.
Bad Luck unluck	Harmful	A bounded downside; avoid opaque global RNG penalties.
Slow Falling slow_falling	Beneficial	Protection from a single event is a proposed prevention mechanic.
Conduit Power conduit_power	Beneficial	Aquatic aura from a vulnerable block.
Dolphin's Grace dolphins_grace	Beneficial	Schooling or temporary Aquatic Attack.
Bad Omen bad_omen	Neutral	A visible delayed challenge; objective counters need code.
Hero of the Village hero_of_the_village	Beneficial	Villager aura or generated trade reward.
Darkness darkness	Harmful	An explicit debuff, never a deliberately unreadable interface.
Trial Omen trial_omen	Neutral	A visible condition leading to a reward; future objective system.
Raid Omen raid_omen	Neutral	An authored Illager wave; avoid hidden automatic spawns.
Wind Charged wind_charged	Harmful	A return/transform response, or future positional mechanic.
Weaving weaving	Harmful	Web generation or a small defensive token.

Effect / ID	Game category	Card inspiration (proposal)
Oozing oozing	Harmful	A finite Slime summon on an appropriate trigger.
Infested infested	Harmful	Small Arthropod tokens, with board-space limits.
Breath of the Nautilus breath_of_the_nautilus	Beneficial	Aquatic sustain or companion support; do not invent a new meter.

Vanilla potion definitions

VANILLA INDEX: all 46 registered potion definitions. Durations are exact base effect ticks with seconds at 20 ticks/second. Delivery by splash, lingering cloud or arrow can change effective application; this table does not claim all bottles, arrows and clouds have identical duration. Minecraft seconds are not Craftbound turns. Define card timing independently.

Potion ID	Registered contents
water	No status effect (base liquid/preparation).
mundane	No status effect (base liquid/preparation).
thick	No status effect (base liquid/preparation).
awkward	No status effect (base liquid/preparation).
night_vision	Night Vision 1; 3600 ticks / 180.0 seconds
long_night_vision	Night Vision 1; 9600 ticks / 480.0 seconds
invisibility	Invisibility 1; 3600 ticks / 180.0 seconds
long_invisibility	Invisibility 1; 9600 ticks / 480.0 seconds
leaping	Jump Boost 1; 3600 ticks / 180.0 seconds
long_leaping	Jump Boost 1; 9600 ticks / 480.0 seconds
strong_leaping	Jump Boost 2; 1800 ticks / 90.0 seconds
fire_resistance	Fire Resistance 1; 3600 ticks / 180.0 seconds
long_fire_resistance	Fire Resistance 1; 9600 ticks / 480.0 seconds
swiftness	Speed 1; 3600 ticks / 180.0 seconds
long_swiftness	Speed 1; 9600 ticks / 480.0 seconds
strong_swiftness	Speed 2; 1800 ticks / 90.0 seconds
slowness	Slowness 1; 1800 ticks / 90.0 seconds
long_slowness	Slowness 1; 4800 ticks / 240.0 seconds
strong_slowness	Slowness 4; 400 ticks / 20.0 seconds
turtle_master	Slowness 4; 400 ticks / 20.0 seconds; Resistance 3; 400 ticks / 20.0 seconds
long_turtle_master	Slowness 4; 800 ticks / 40.0 seconds; Resistance 3; 800 ticks / 40.0 seconds
strong_turtle_master	Slowness 6; 400 ticks / 20.0 seconds; Resistance 4; 400 ticks / 20.0 seconds
water_breathing	Water Breathing 1; 3600 ticks / 180.0 seconds
long_water_breathing	Water Breathing 1; 9600 ticks / 480.0 seconds

Potion ID	Registered contents
healing	Instant Health 1; instant
strong_healing	Instant Health 2; instant
harming	Instant Damage 1; instant
strong_harming	Instant Damage 2; instant
poison	Poison 1; 900 ticks / 45.0 seconds
long_poison	Poison 1; 1800 ticks / 90.0 seconds
strong_poison	Poison 2; 432 ticks / 21.6 seconds
regeneration	Regeneration 1; 900 ticks / 45.0 seconds
long_regeneration	Regeneration 1; 1800 ticks / 90.0 seconds
strong_regeneration	Regeneration 2; 450 ticks / 22.5 seconds
strength	Strength 1; 3600 ticks / 180.0 seconds
long_strength	Strength 1; 9600 ticks / 480.0 seconds
strong_strength	Strength 2; 1800 ticks / 90.0 seconds
weakness	Weakness 1; 1800 ticks / 90.0 seconds
long_weakness	Weakness 1; 4800 ticks / 240.0 seconds
luck	Luck 1; 6000 ticks / 300.0 seconds
slow_falling	Slow Falling 1; 1800 ticks / 90.0 seconds
long_slow_falling	Slow Falling 1; 4800 ticks / 240.0 seconds
wind_charged	Wind Charged 1; 3600 ticks / 180.0 seconds
weaving	Weaving 1; 3600 ticks / 180.0 seconds
oozing	Oozing 1; 3600 ticks / 180.0 seconds
infested	Infested 1; 3600 ticks / 180.0 seconds

Potion delivery families: drinkable potion, splash potion, lingering potion and tipped arrow. Their base item IDs appear in the complete item index. One item ID can carry many potion components; those component combinations are not separate item registrations.

Vanilla enchantments

VANILLA INDEX with design suggestions. Max level is the vanilla definition, not a suggested Craftbound card power. The proposed translation does not add the mechanic automatically.

Name / ID	Vanilla max	Card interpretation (proposal)
Aqua Affinity aqua_affinity	1	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.
Bane of Arthropods bane_of_arthropods	5	Arthropod-specific answer; keep narrow tech playable.
Curse of Binding binding_curse	1	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.
Blast Protection blast_protection	4	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.
Breach breach	4	Armor interaction requires a defined damage rule.
Channeling channeling	1	Lightning-themed damage; weather condition is proposed.
Density density	5	Heavy combat payoff; falling-height calculations are not a card rule.
Depth Strider depth_strider	3	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.
Efficiency efficiency	5	Mining payoff or Durability; Miner.
Feather Falling feather_falling	4	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.
Fire Aspect fire_aspect	2	DAMAGE_DEALT effect attached to a tool; Fighter.
Fire Protection fire_protection	4	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.
Flame flame	1	Attack/damage trigger for a ranged tool.
Fortune fortune	3	Extra mining reward; Miner.
Frost Walker frost_walker	2	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.

Name / ID	Vanilla max	Card interpretation (proposal)
Impaling impaling	5	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.
Infinity infinity	1	Unlimited resources are dangerous; prefer a finite generation effect.
Knockback knockback	2	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.
Looting looting	3	ON_KILL generation; Fighter.
Loyalty loyalty	3	Return-on-break would need that trigger.
Luck of the Sea luck_of_the_sea	3	Fixed catch-table reward; Fisherman.
Lunge lunge	3	Forward pressure/Sprint theme; use a supported target rule.
Lure lure	3	More frequent finite catches; do not imply extra attacks.
Mending mending	1	Resource-triggered repair; verify cost and event support.
Multishot multishot	1	Extra targets; generic splitting is not yet a single action.
Piercing piercing	4	Do not bypass Shield without explicit targeting code.
Power power	5	Ranged tool Attack; price safe trades carefully.
Projectile Protection projectile_protection	4	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.
Protection protection	4	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.
Punch punch	2	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.
Quick Charge quick_charge	3	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.
Respiration respiration	3	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.

Name / ID	Vanilla max	Card interpretation (proposal)
Riptide riptide	3	Mobility theme; no hidden extra attacks.
Sharpness sharpness	5	Attack increase; Fighter.
Silk Touch silk_touch	1	Return a resource instead of consuming it; exact rule needs design.
Smite smite	5	Undead-specific combat payoff; new damage-type/conditional filtering may be needed.
Soul Speed soul_speed	3	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.
Sweeping Edge sweeping_edge	3	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.
Swift Sneak swift_sneak	3	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.
Thorns thorns	3	ATTACKED damage; explicit effect differs from retaliation.
Unbreaking unbreaking	3	Tool Durability increase.
Curse of Vanishing vanishing_curse	1	Protection, mobility or utility theme. Use a supported Health/keyword effect, or clearly mark new rules as proposed.
Wind Burst wind_burst	3	Displacement/return theme; board adjacency is proposed.

Vanilla entities and mobs

VANILLA INDEX: all 161 entity types, including all registered mobs plus projectiles, vehicles, displays and technical entities. The category is Minecraft's internal spawn category, not its attitude and not Craftbound's type. For example, NPCs and utility creatures may appear under miscellaneous. Unused/command-only types are intentionally retained.

Entity / ID	Registry category

Common design families: passive farm animals; tameable companions; aquatic life; Villagers and traders; Illagers; Undead; Nether creatures; End creatures; Arthropods; Golems; Slimes; bosses. Appearance variants and baby/adult states often share an entity ID. Do not interpret the category column as a complete behavioral taxonomy.

Complete vanilla item index

VANILLA INDEX: all 1658 registered items. Every identifier in this index has the minecraft: namespace; it is omitted below to keep entries readable. Categories are editorial browsing groups, not authoritative tags. All variants with separate registry IDs are listed. The same object can appear in both item and block indexes.

Complete vanilla block index

VANILLA INDEX: all 1286 registered blocks. Every identifier in this index has the minecraft: namespace; it is omitted below to keep entries readable. Categories are editorial browsing groups, not authoritative tags. All variants with separate registry IDs are listed. The same object can appear in both item and block indexes.

Color, decoration and furnishings (262)

Vanilla biomes and structures

VANILLA DATA INDEX. Biomes are proposed as cosmetic board themes and NPC deck inspiration for Foundation, not additional combat rules. Structures can inspire authored encounters or rewards. IDs are exact data-resource identifiers; visual variants and generated arrangements are not separate entries.

Current Craftbound card snapshot

CURRENT SNAPSHOT of the bundled catalogue, not your custom development file: 98 definitions, 80 collectibles. Existing IDs/order are unchanged. This is a source-backed inventory of current text, not an endorsement of the old Foundation balance. Custom descriptions remain authored text and can differ in style from newly generated descriptions.

Neutral

Card / stable ID	Current attributes	Current rules text
Rotten Flesh craftbound:rotten_flesh	0 XP | Common Item | Token	Heal your hero 2.
Arrow craftbound:arrow	1 XP | Common Item | Token	Deal 2 damage to a mob or block.
